SCIENTIFIC FOCUS AREAS

My research focuses on cardiovascular and oncological pharmacotherapy, centered on the investigator-initiated multicenter SAMSON-2 trial. As sponsor and principal investigator, I lead this randomized N-of-1 trial platform to systematically evaluate statin-associated muscle symptoms and overcome drug intolerance. In parallel, I lead the TDM-VISION project, establishing therapeutic drug monitoring algorithms for targeted oral therapies in chronic lymphocytic leukemia. Methodologically, my work bridges prospective clinical trials, nationwide Danish health registries, and clinical pharmacogenetics to translate precision medicine into direct bedside decisions.
